

A Foundation For Change

TecCrete® Access Flooring works with modular power, voice, data, and underfloor air to create an adaptable utilities distribution platform that integrates seamlessly with our moveable walls and panel systems. Our access flooring is a foundation for change throughout the entire facility from workstations to the data center. Haworth can help you create workspaces that adapt to change, generate less waste, reduce energy costs, and improve indoor air quality—all good for your people, the environment, and your bottom line.
